

A P P B A Y

Bank Data Platform

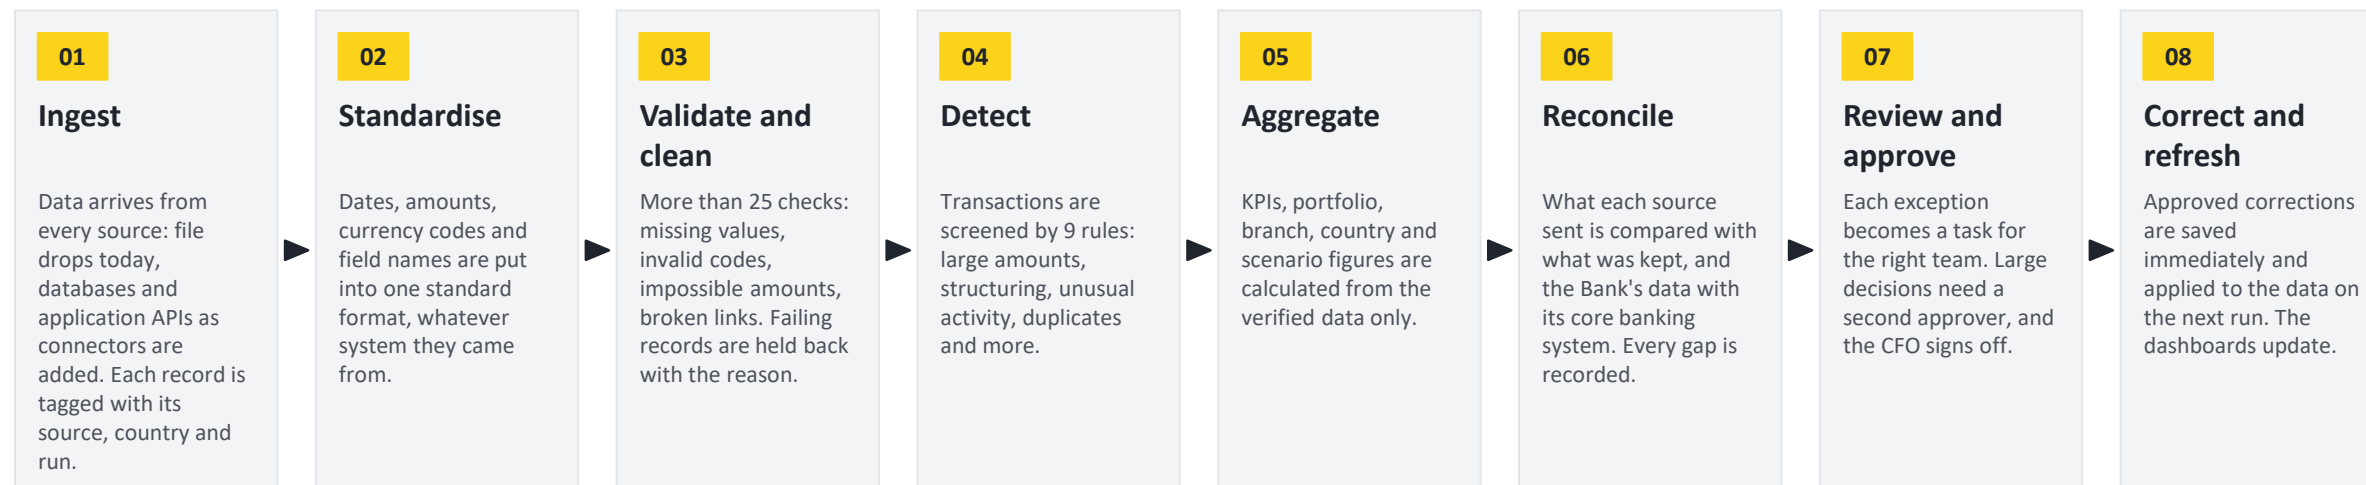

One trusted set of numbers from every system the bank runs

Collect · Verify · Measure · Act

Client demo · September 2026

Eight Steps From Raw Data to an Approved Number.

Every run follows the same path. The first six steps run automatically in Databricks, in about ten minutes for the current data. **The last two involve people:** reviewing what the checks found, and approving the fixes.

RAW LAYER
What each source sent, in one standard format

CLEAN LAYER
Verified records + rejection log

BUSINESS LAYER
Flags, KPIs, summaries and reconciliation results

IN THE APP
Results loaded to the app: tasks, approvals, audit trail

1 On-prem
Your data centre, your control

2 Scalability
10 sources today, 1,000 tomorrow

3 Azure services
Powered by Azure UAE North

4 Security
Role-based access, dual approval, audit trail

WHY IT IS BUILT THIS WAY

Nothing disappears silently

A rejected record is never deleted. It is logged with the check it failed, counted in the reconciliation and turned into a task.

Screens stay fast

The heavy work happens in the nightly run. The screens read small, pre-calculated summaries, so they open in seconds.

Runs on arrival or on demand

A run starts when a new file lands, on a daily schedule, or when the CFO presses Refresh Now after approving corrections.

Recent ingestions

Every load, with what it received and whether it succeeded.

Source	Type	Data	Records received	Status	Last run
Lebanon Core Banking	SFTP	transactions.csv	755	Success	25 Sep, 06:24
Lebanon Core Banking	SFTP	accounts.csv	229	Success	25 Sep, 06:24
Saudi Arabia ERP	REST API	transactions	165	Success	25 Sep, 06:21
Qatar Core Banking	Database	transactions	92	Processing	25 Sep, 06:30
Group Treasury	Azure Blob	fx_rates.csv	42	Success	25 Sep, 06:05
Qatar CRM	REST API	customers	0	Failed	25 Sep, 06:02

Scheduled pulls

Connectors run on their own; no one has to remember.

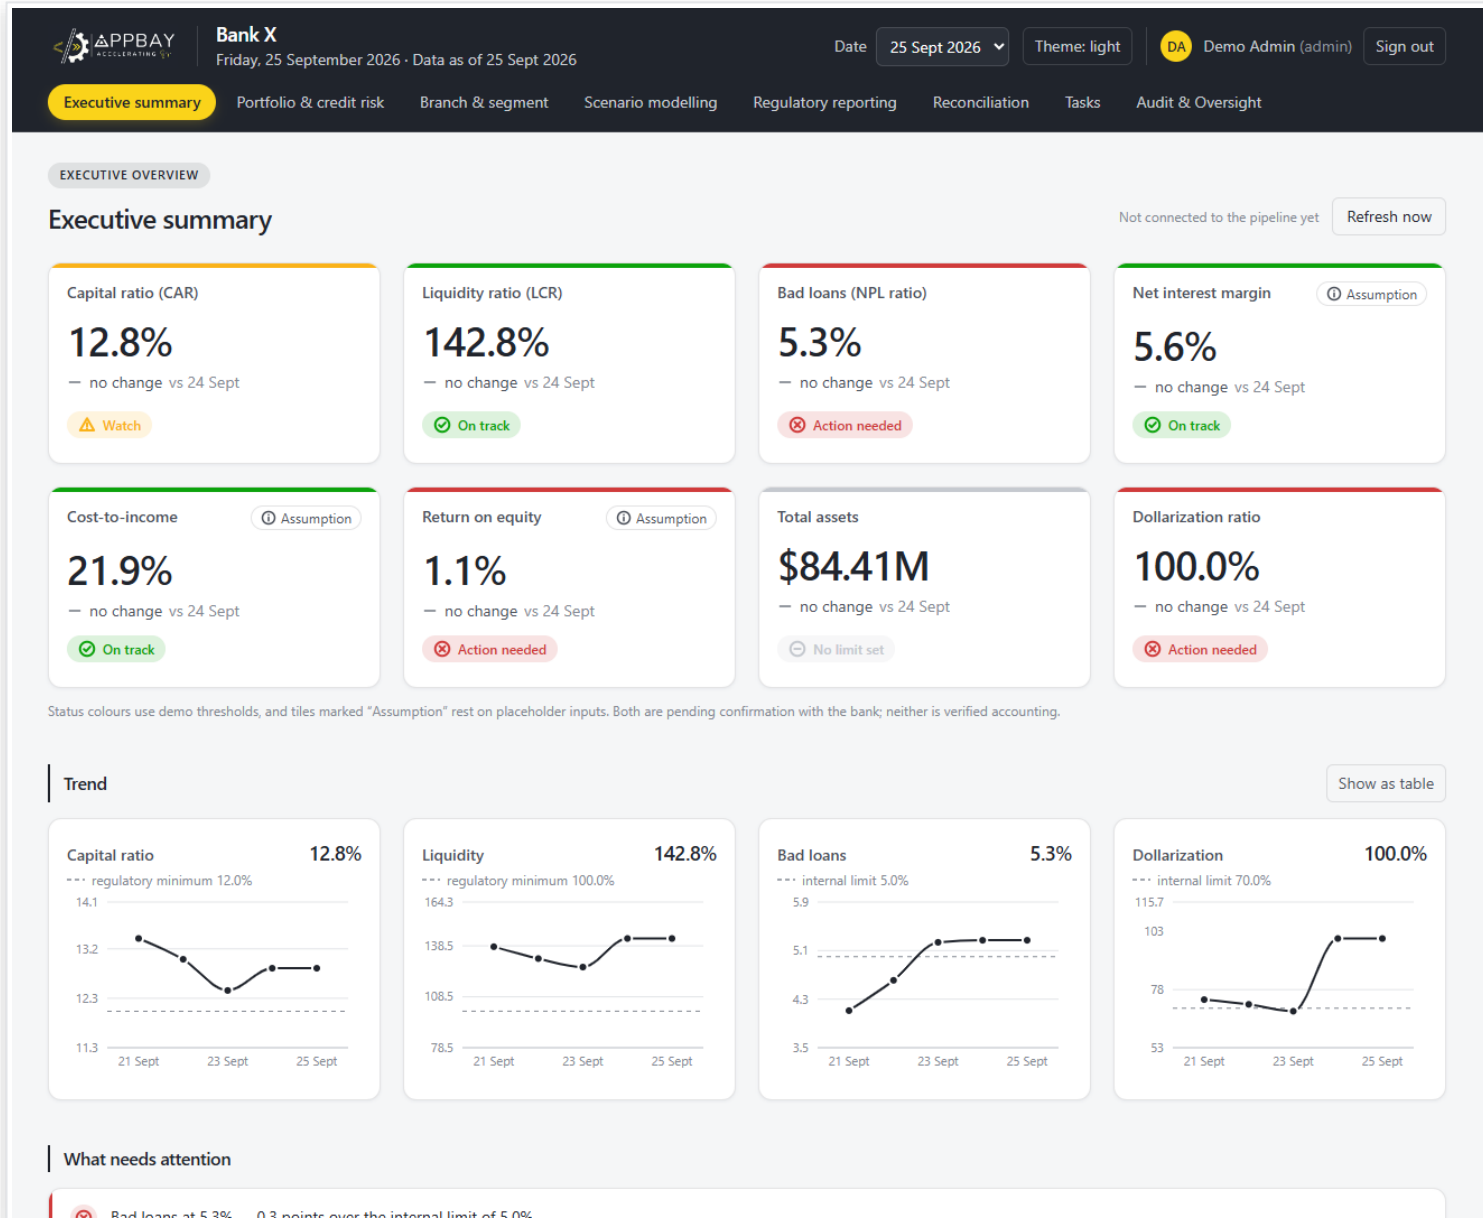

Source	Runs	Next pull
Lebanon Core Banking	Daily 02:00 + on file arrival	26 Sep, 02:00
Saudi Arabia ERP	Every 6 hours	25 Sep, 12:00
Group Treasury	Daily 06:00	26 Sep, 06:00

STEP 1

Data Ingestion

Every source, one way in

- 1 Multi-source ingestion: core banking, ERP, CRM, databases and spreadsheets.
- 2 Upload files (CSV, XLSX, JSON, XML, PDF) or connect a live source.
- 3 Scheduled and automatic pulls, so no one has to remember.
- 4 Status tracked for every load: records received, success or failure.

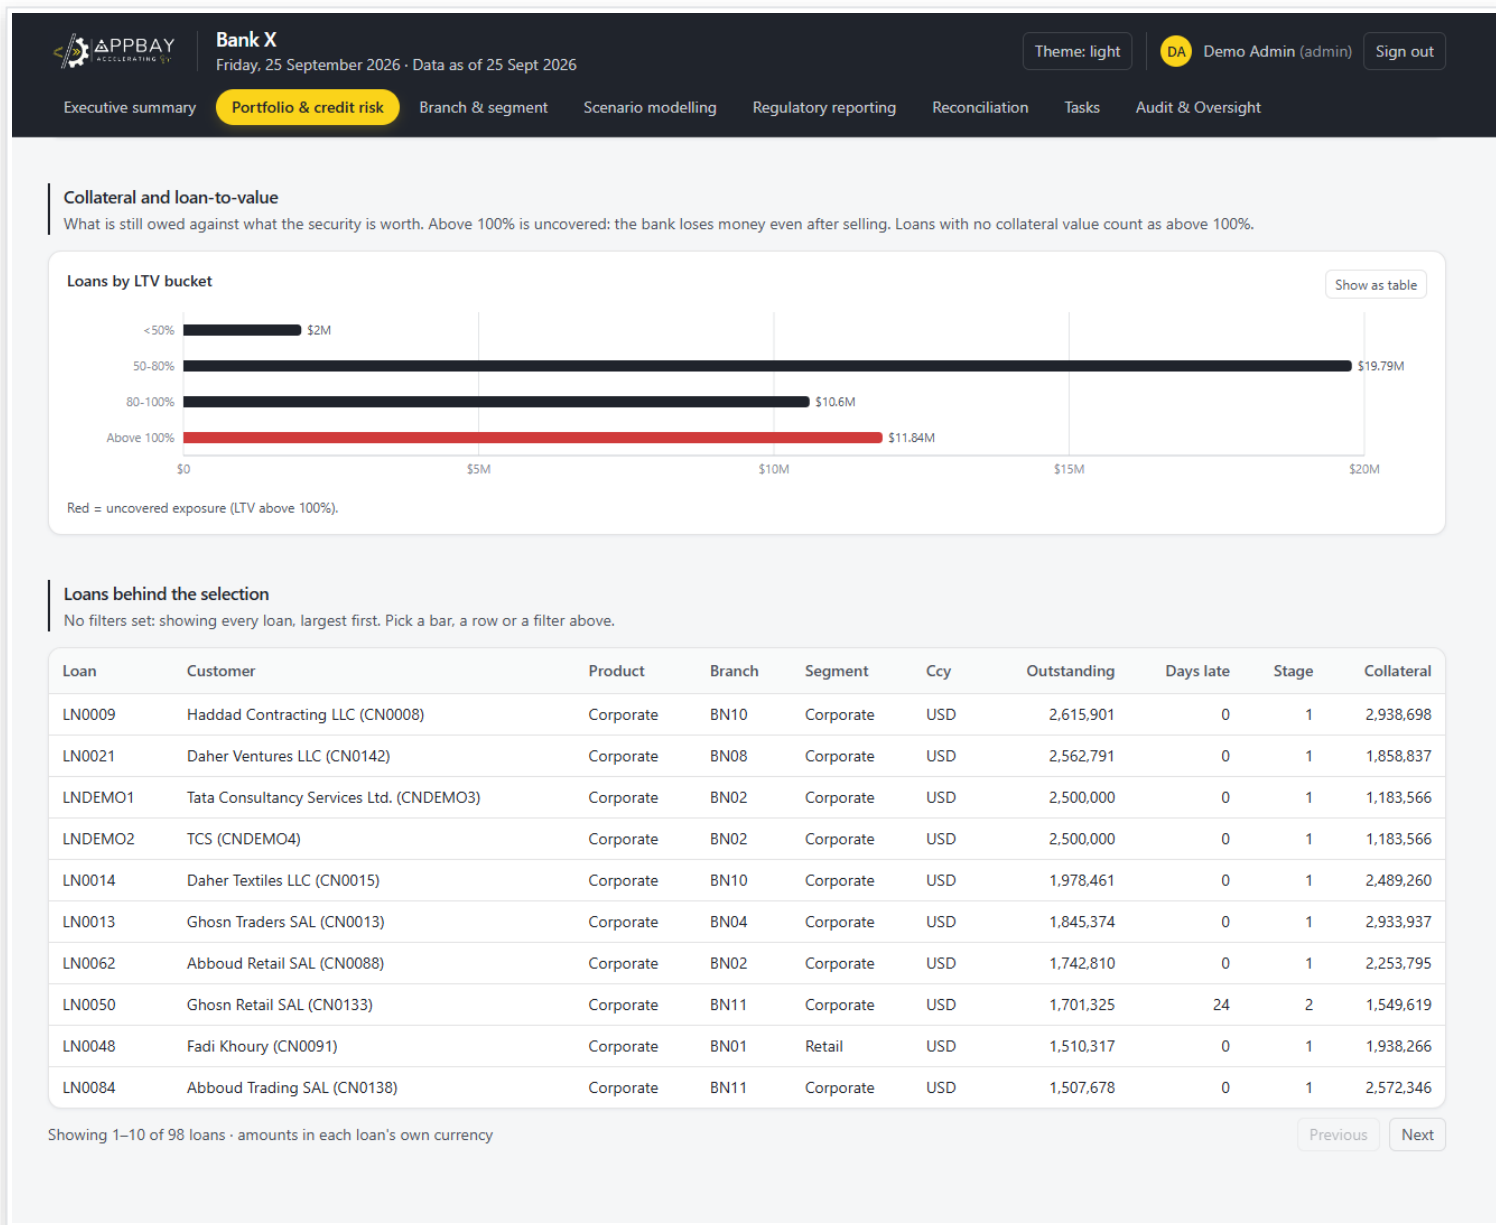

STEP 2

Executive Summary

The bank on one page

- 1 Eight KPI tiles, each compared with the previous day and coloured by its limit.
- 2 Tiles resting on placeholder inputs are clearly marked "Assumption".
- 3 Trends plotted against regulatory minimums and internal limits.
- 4 Refresh now re-runs the pipeline on demand.

STEP 3

Portfolio & Credit Risk

Where the loan book is exposed

1

Loans grouped by loan-to-value; red marks exposure above 100%, not covered by collateral.

2

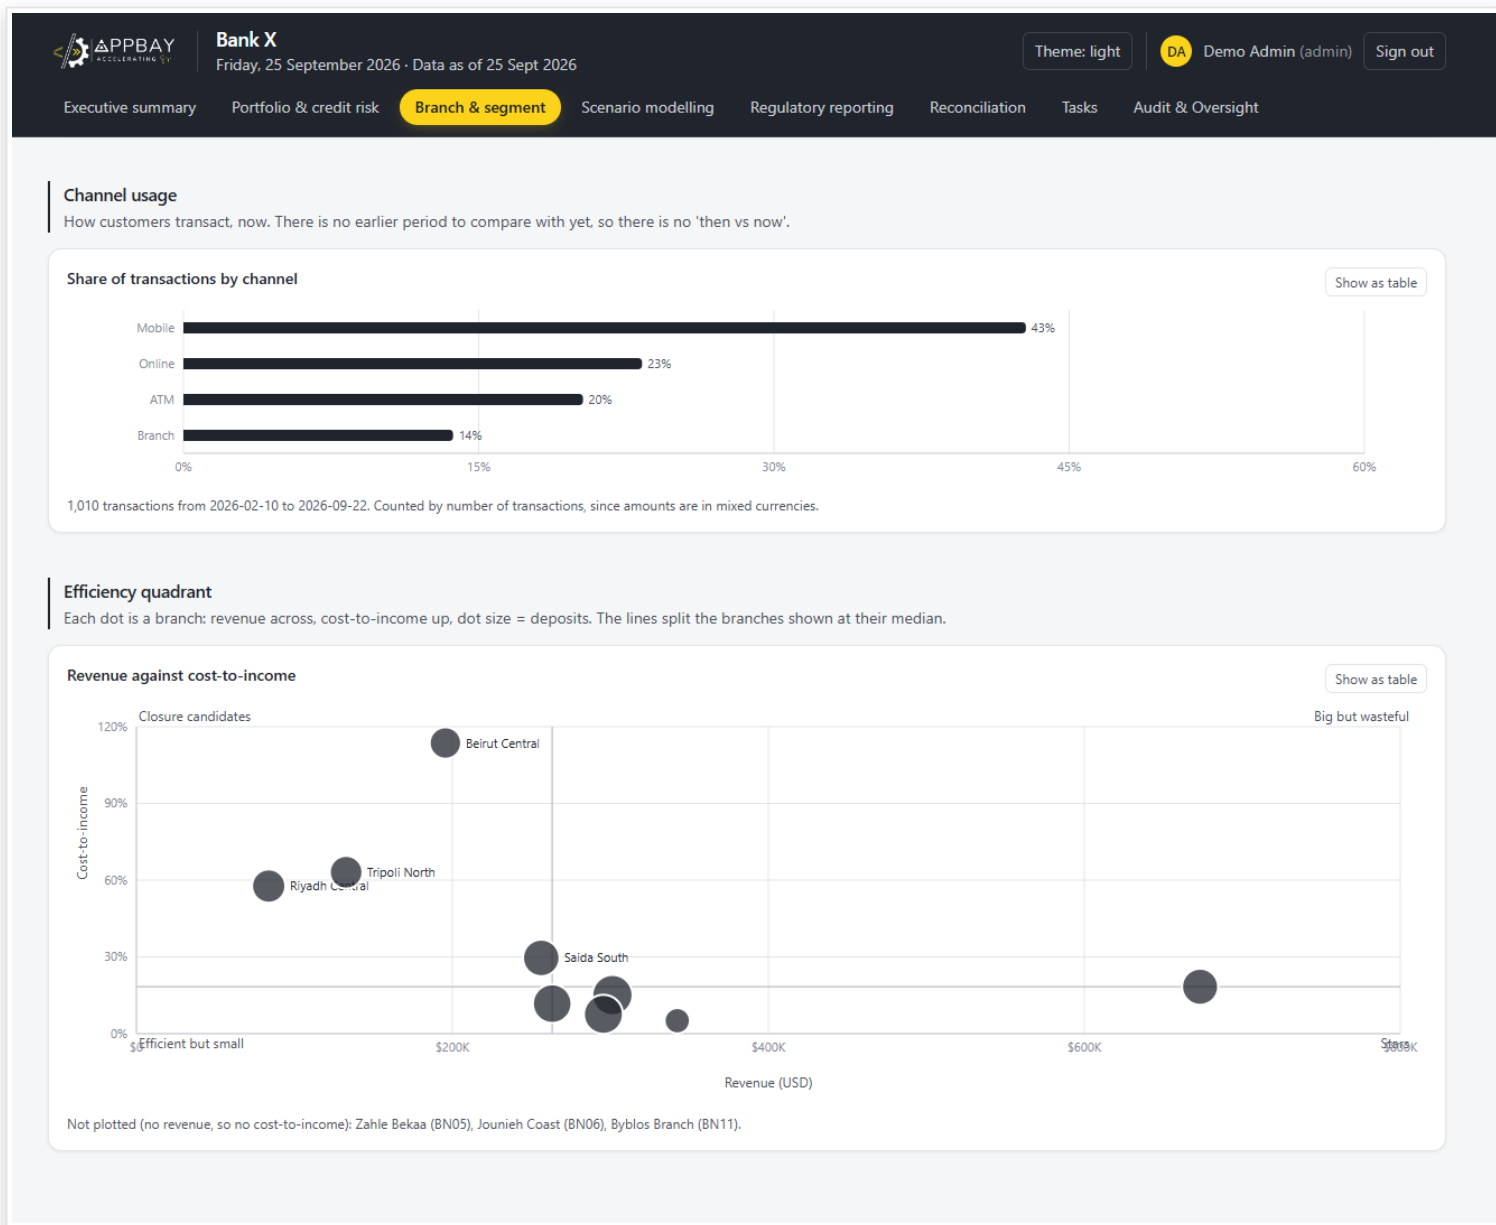

Click a bar or filter to list the loans behind it, largest first.

3

Each loan shows customer, branch, segment, currency, days late, IFRS 9 stage and collateral.

4

Amounts stay in each loan's own currency.

STEP 4

Branch & Segment

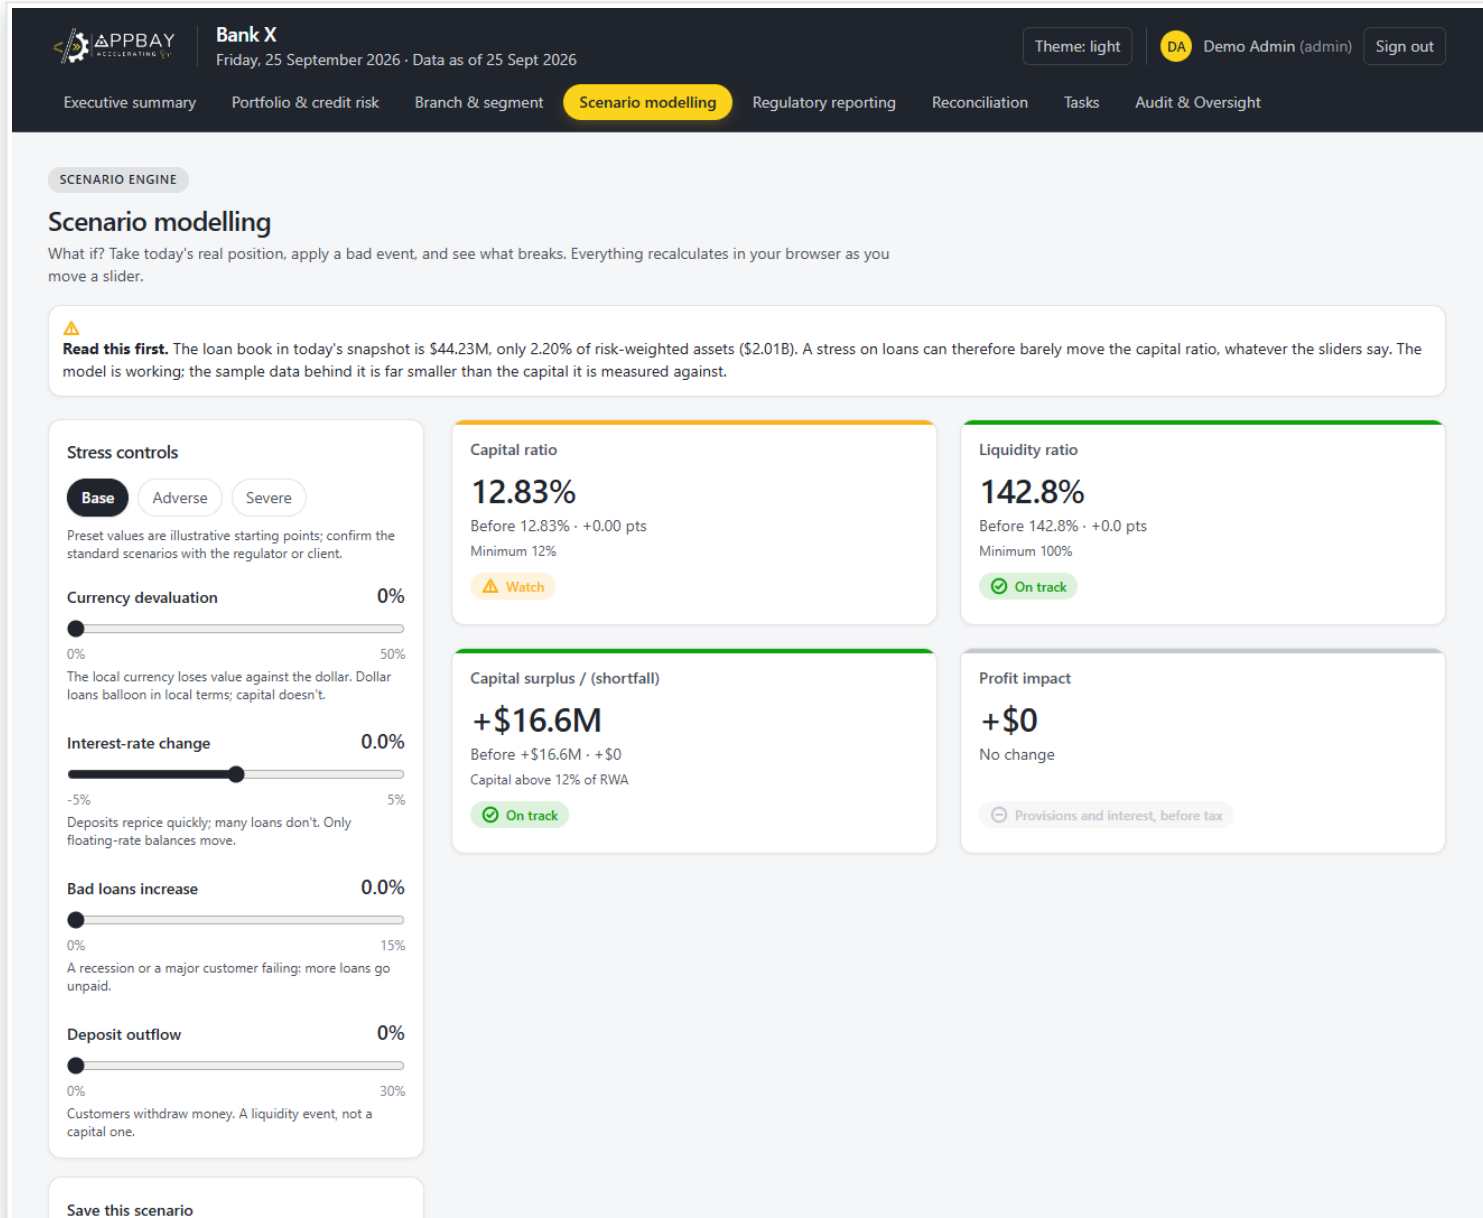

How branches and channels perform

1 Channel usage: the share of transactions by mobile, online, ATM and branch.

2 Efficiency quadrant: each branch by revenue vs cost-to-income, sized by deposits.

3 Stars and closure candidates stand out at a glance.

4 Every chart can also be shown as a table.

STEP 5

Scenario Modelling

Stress-test before it happens

- 1 Start from base, adverse or severe presets, or set your own shocks.
- 2 Sliders for currency devaluation, interest-rate change and bad-loan increase.
- 3 Capital, liquidity, surplus and profit recalculate instantly as you move a slider.
- 4 Every result shown before vs after, against the regulatory minimum.

STEP 6

Reconciliation

Breaks grouped by cause

1 Every difference between the Bank's data and its core banking system, grouped by cause.

2 Important breaks (missing records, key fields, 10,000+) always stand alone, with a one-day deadline.

3 Large bulk groups, such as 12 accounts at -9,000, need a second approval.

4 Each break shows the core value vs ours, how long it has been open, and a CSV export.

STEP 7

Tasks

One decision for a whole group

1

Every task has an owner, a severity and a due date, in one review queue.

2

Open a group to see each break side by side: core system vs our data.

3

Leave individual breaks out, then accept, correct or dismiss the rest.

4

A comment is required, and large bulk decisions go to the CFO for approval.

Ask about your data

AI DATA ASSISTANT

How many records were rejected in today's load, and why?

+

3 of 1,696 records (0.18%) were held back in the 25 Sept load, all from Lebanon:

Reason	Data	Records	Example
Invalid channel	Transactions	1	Channel "Cheque"
Missing amount	Transactions	1	Blank amount
Invalid currency	Accounts	1	ACNDEMO1, currency "XYZ"

They leave a 4,000 USD and a 50,000 gap, both with the CFO. [View records](#)

Sources: data_quality_exceptions · run 25 Sep 06:27 Received vs kept · Lebanon

Which accounts were flagged in the latest reconciliation?

+

25 accounts in 6 groups differ from the core banking system. The largest:

ACN0020 · +48,000

12 accounts · -9,000

5 accounts · -250

4 accounts · +15

important

2nd approval

bulk

bulk

Plus ACNDEMO2, missing from core banking. [View in report](#)
